BRIDGELINK AMS; PROFESSIONAL, COST EFFECTIVE, INTERNATIONALLY SUPPORTED

BridgeLink AMS is an agile and intuitive monitoring system

The AMS provides a compact interface for the monitoring and control of pumps, alarms, and other networked vessel systems, providing clear readings for ship crews to quickly monitor and react to changes in system status.

BridgeLink AMS is Australian designed and manufactured, cost effective, and packages high quality hardware, service and ongoing system support from AMI's in-house local & Australasian service agents.

The system can be configured to a variety of vessel setups, and AMI provide life cycle support from personalising the system build to suit the vessel, commissioning, and after sales support. The product includes a standard Warranty.

Why Choose BridgeLink AMS?

- Cost Effective
- High level of redundancy with managed Ethernet switch
- All individual components are type approved
- Engineered and manufactured in Australia
- High quality graphics
- Simple modular design allows for customisation
- Option to interface with external systems
- Custom remote terminal units available

Systems monitored include but not limited to:

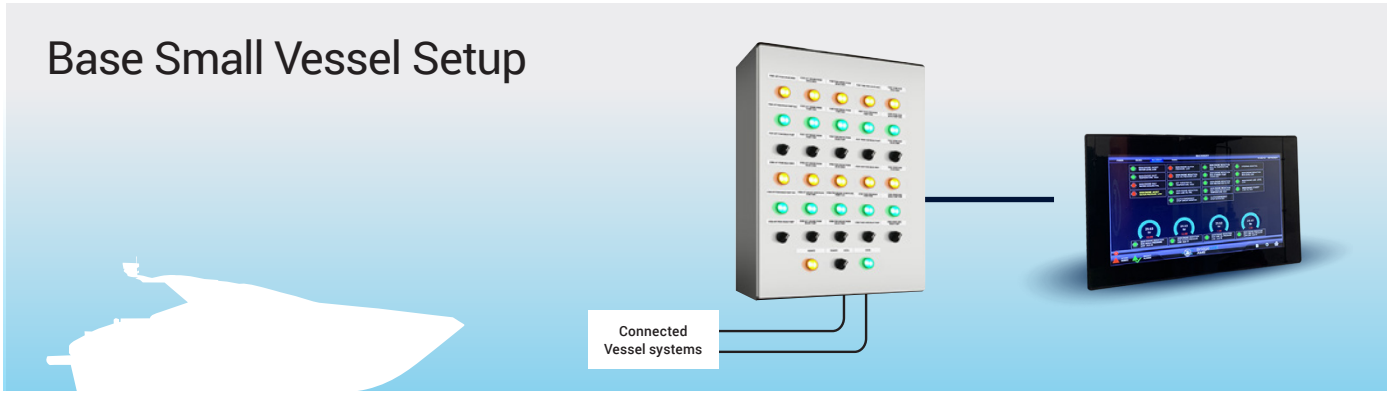

Recent BridgeLink AMS installations, based in the engine room and helm
